

LAABH GUPTA

AI/ML Engineer | Software Engineer | MLOps & DevOps

Kanpur, India | +91 9793084444 | reachlaabhgupta@gmail.com

GitHub: Laabh-Gupta | LinkedIn: laabhgupta | Portfolio

PROFILE

Computer Science engineer specializing in AI/ML, with enterprise AI and data engineering experience at EY GDS and independent AI product development. Builds across model integration, full-stack applications, APIs, databases, automated testing and deployment workflows.

PROFESSIONAL EXPERIENCE

Ernst & Young Global Delivery Services

AI & Data Engineer | Jun 2026 - Present

Converted to a full-time AI & Data Engineer role following the January-May 2026 internship.

Ernst & Young Global Delivery Services

AI & Data Intern | Jan 2026 - May 2026

- Contributed to enterprise AI, data engineering and MLOps solutions using Generative AI, RAG, Agentic AI, Databricks, MLflow, PySpark, REST APIs and full-stack development.

- **Agentic Data Ingestion Platform:** contributed to automated discovery and ingestion of enterprise data from multiple cloud sources. A reusable JSON configuration framework was designed to reduce manual setup and inconsistent ingestion workflows.

Technologies: Streamlit, Databricks, Unity Catalog, LangChain, REST APIs, JSON configuration and Control Plane Service.

- **MLOps Experiment Tracking Dashboard:** contributed to centralized visibility into experiment runs, metrics and model comparison across Databricks, improving traceability and stakeholder visibility beyond the default MLflow UI.

Technologies: MLflow, Databricks SQL, Delta Tables, PySpark, FastAPI, Uvicorn, React, Axios, Python, scikit-learn, pandas and NumPy.

Hindustan Aeronautics Limited

Tech Intern | Jun 2025 - Jul 2025

- Developed and deployed a secure full-stack application for aircraft-part manufacturing cost estimation, improving decision-making speed by approximately 25%.

- Built a Node.js and MySQL backend for man-hour, man standard rate and material cost computation, retrieval and reporting.

- Implemented express-session authentication, bcrypt password hashing and role-based access control within an MVC architecture; used GitHub version control and a CI/CD deployment workflow.

EDUCATION

Vellore Institute of Technology, Chennai

B.Tech, Computer Science Engineering with Artificial Intelligence and Machine Learning

2022 - 2026 | CGPA: 8.1 / 10

SELECTED ACHIEVEMENTS

370+ LeetCode problems solved; top 2% globally. Selected among the Top 20 AI/ML students nationally through HackClub.

SELECTED ENGINEERING WORK

Laabh Gupta | AI applications, software & MLOps

FLAGSHIP PROJECT

ArguLab - AI Communication Practice & Personalized Training

[Live product](#) | [Public product guide](#) | [Code and architecture](#)

- Built an AI training platform with nine practice modes: Debate, Group Discussion, Interview, Public Speaking, Extempore, Negotiation, Case Discussion, Real-World Simulation and Observer Analysis.
- Engineered an adaptive loop that summarizes sessions, extracts strengths and weaknesses, persists user-specific context and supplies that context to future session requests.
- Integrated streaming conversations and structured evaluation through Groq using openai/gpt-oss-120b. Added browser recording, Whisper transcription (whisper-large-v3-turbo), editable transcripts and browser Speech Synthesis.
- Implemented authenticated APIs, session persistence, user data ownership, database access controls, rate limiting, history, resumable sessions, transcripts, reviews, reports and JSON export.

Stack: React 19, TypeScript, Vite, TanStack Router, Tailwind CSS, Fastify, Better Auth, AI SDK, PostgreSQL and Supabase. Netlify frontend, Render backend and Docker backend configuration. Responsive mobile-first experience.

Documented v3.0.1 verification: 47 unit/integration tests and 21 Playwright browser tests passed.

Voice Anti-Spoofing System

[Project Lead](#) | Dec 2024 - Mar 2025 | [Repository](#)

- Developed a deep-learning system to distinguish AI-generated speech from genuine human speech using Mel Spectrograms, CNNs, Vision Transformers and data augmentation; achieved 99.75% test-set accuracy.
- Served PyTorch models through a FastAPI REST backend and built a React frontend, deploying the system as a full-stack application.

TECHNICAL TOOLKIT

Languages: Java, Python, C, C++, SQL. **AI/ML:** PyTorch, TensorFlow, scikit-learn, OpenCV, pandas, NumPy, MLflow.

GenAI: RAG, Agentic AI, LangChain, Groq, AI SDK, structured AI workflows.

Frontend: React, TypeScript, JavaScript, Vite, Tailwind CSS, HTML, CSS, Streamlit. **Backend:** Fastify, FastAPI, Node.js, Express.js, Spring Boot, Spring Security, Better Auth, JWT, REST APIs, Uvicorn.

Data: PostgreSQL, Supabase, Databricks, PySpark, Delta Tables, MySQL, MongoDB. **Engineering:** Docker, CI/CD, GitHub Actions, Git, GitHub, Bun, Jupyter, VS Code, IntelliJ.

Training and practice: DVC, Kubernetes, KServe, AWS EC2, S3 and SageMaker through MLOps training; not represented as large-scale production experience.

CERTIFICATIONS & CONTINUED LEARNING

MLOps Zero to Hero - Udemy | 14 Sep 2026 | 12.5 hours | [Certificate](#)

ML lifecycle, data versioning, MLflow, Docker, cloud deployment, Kubernetes, KServe, CI/CD and monitoring.

Databricks Machine Learning Practitioner Learning Plan - completed learning plan covering PySpark, MLflow, ML lifecycle and MLOps.

Data Structures & Algorithms in Java - Great Learning Academy.
